ABOUT ME

I am a Computer Engineer and Business Administration graduate. I currently work as a full-stack developer in the renewable energy sector, building everything from interfaces on embedded Linux systems to internal web applications from scratch. My dual background gives me a different perspective: I don't just focus on how to build software, but on understanding why it's worth building in the first place.

I'm passionate about high-impact projects, space exploration, and automation. I integrate AI daily to work smarter, but I actively study and improve my programming skills, as I don't believe we are anywhere near being replaced by it yet. My goal is to surround myself with brilliant people to solve hard problems, and I am completely open to relocating anywhere in Europe or the US (having already lived in Belgium and Lithuania) to join a project that matters.

WORK EXPERIENCE

Full-Stack Developer

Apr 2025 - Present

Zigor — Valencia, España

Software development for the renewable energy sector: HMI interfaces for high-power solar inverters on embedded Linux platforms (SoM), and internal web applications for company process digitalization. I work with Python, Vue, Astro, Flask, SQL, Docker, and industrial protocols (Modbus, CAN, SCADA).

- Designed and built from scratch an internal web app (Astro + PostgreSQL + Vue) for inventory management and lab scheduling that significantly improved team productivity
- Built REST APIs with Flask under external client requirements with extensive behavior specification lists
- Designed an automated internationalization (i18n) pipeline to manage translations seamlessly
- Managed the full lifecycle: from requirements to deployment with Docker on self-hosted servers and SoMs

R&D Technical Consultant

Dec 2024 - Feb 2025

Leyton — Valencia, España

Advised companies on obtaining public and private funding for R&D and innovation projects. Wrote complete technical reports for innovation projects across various sectors. I left this role to return to positions more focused on software development and engineering.

Erasmus Correspondent in Flanders

Feb 2022 - Jun 2022

Erasmus en Flandes — Gante, Bélgica

Editor at the 'Erasmus in Flanders' blog, creating content to promote tourism and student life in the Flanders region during my Erasmus stay in Belgium.

EDUCATION

Double Bachelor's Degree in Computer Engineering and Business Administration

2018 - 2024

Universitat Politècnica de València — Valencia, España

Thesis: Full-stack application (React + Python + SQL) for news generation and editing with GPT, integrating RAG and LangChain agents. Included business plan and technological development.

Erasmus — Computer Engineering

2021 - 2022

Vilniaus Gedimino Technikos Universitetas — Vilnius, Lituania

Erasmus — Business Administration

2022

Universiteit Gent (Ghent University) — Gante, Bélgica

High School Diploma in Science and Economics

2016 - 2018

Colegio Sagrado Corazón Hermanos Maristas — Valencia, España

SKILLS

Languages: Python • TypeScript / JavaScript • Java • SQL • HTML / CSS

Frontend: Vue • React • Astro • Tailwind CSS

Backend & Infrastructure: Flask • REST APIs • PostgreSQL • SQLite • Docker • Linux • Git • CI/CD

Protocols & Embedded: Modbus • CAN • SCADA • Sistemas embebidos Linux (SoM)

AI & Data: LangChain • RAG • NLP • LLMs / Prompt Engineering

Soft Skills: Liderazgo • Autonomía • Resolución de problemas • Comunicación • Trabajo en equipo • Scrum / Agile

PERSONAL PROJECTS

GPT News Editor

2024

React • Python • SQL • LangChain • GPT / OpenAI

Full-stack application built as my Bachelor's Thesis: a GPT-powered news editor with RAG architecture and LangChain agents. Users can generate, edit, and refine articles through a Human-in-the-Loop workflow. My first real end-to-end development experience, far beyond academic exercises.

Portfolio Web ↗

2026

Astro • TypeScript • Tailwind CSS • Typst

My personal website and live CV, built with Astro with automatic PDF export via Typst. Designed so I can update my CV quickly, with internationalization (ES/EN), dark mode, and a minimalist design that reflects my style.

Zigor Internal Tools

2025

Astro • Vue • PostgreSQL • Python • Docker • Modbus

Internal web application I designed and developed on my own initiative to organize lab inventory and team scheduling. I learned Astro and PostgreSQL from scratch, integrated Vue components, user management, Modbus connectivity, and full deployment with Docker on self-hosted servers. It had a real, direct impact on my colleagues' productivity.

VOLUNTEERING & ACTIVITIES

Youth Leader and Leisure & Recreation Instructor

2018 - Present

OJE — Organización Juvenil Española — Valencia, España

Organized and supervised educational and recreational activities for young people: summer camps, outdoor sports (rappelling, hiking), group projects, and workshops. I've guided participants in developing teamwork, leadership, and problem-solving skills while ensuring a safe and engaging environment.

KNOWLEDGE & INTERESTS

Artificial Intelligence & LLMs • Space Exploration • Process Automation • Renewable Energy • Full-Stack Development • Entrepreneurship & Startups • Fitness & Health • Leisure & Recreation Instructor License • Driver's License (B)

LANGUAGES

Spanish: Native

English: C1 — Advanced (C1)

Valencian / Catalan: Native
